CALM SCALE AI

# Prompt Like You Mean It

The Busy Woman's Playbook for Getting AI to Actually Help You

Marie Adams

A CALM SCALE AI GUIDE

*Hey girl. If you've ever typed something into AI, gotten back a paragraph that sounded like a robot wrote it, and thought "well, this doesn't work for me," this little book is for you.*

*It's not that AI doesn't work. It's that nobody ever taught you how to talk to it.*

*Let's fix that.*

Prompt Like You Mean It © 2026 Marie Adams / Calm Scale AI. All rights reserved. AI example outputs are illustrative; your results will vary. This guide is for educational purposes and is not legal, financial, or professional advice.

# What's Inside

CHAPTER 1 Why Your Prompts Keep Failing

CHAPTER 2 The Formula

CHAPTER 3 Everyday Prompts

CHAPTER 4 Business Prompts

CHAPTER 5 Make It a Habit

CHAPTER 6 Bonus: 10 Copy-Paste Starter Prompts

NEXT What's Next

**How to read the examples**

Every example shows the prompt (green box) and what AI actually sent back (gold box). Your results won't match word for word. AI phrases things a little differently every time, and that's normal. What stays the same is the quality you get when you use the formula.

CHAPTER 1

# Why Your Prompts Keep Failing

Let me guess how your first AI experience went.

You opened it up. You typed something like "write me a workout plan" or "help me plan my week." And it gave you back something so generic you could've found it on the third page of Google.

So you closed the tab and went back to doing everything the hard way.

I know, because that was me too.

Here's the truth nobody tells you: AI isn't magic. It's a mirror. It can only reflect back what you put in. Garbage in, generic out. And almost every bad AI answer comes down to one of three mistakes.

## Mistake #1: You're too vague.

"Write me an email."

Okay... about what? To who? What tone? What do you want them to do?

When you ask a vague question, AI fills in the blanks with the most average, boring answer possible. That's not its fault. That's literally all it has to work with.

Think of it like this: if you told a friend "make me food," you'd get whatever was easiest. If you said "I'm starving, make me something with chicken and rice, spicy, and I need it in 20 minutes," now she can actually cook for you.

Same thing here.

## Mistake #2: You ramble.

This one's the opposite problem. You type three paragraphs of backstory, three different questions, and an "oh, also can you..." at the end.

AI tries to answer everything and ends up answering nothing well.

**One prompt, one job.** That's the rule. If you have three questions, that's three prompts. It's faster that way, I promise.

## Mistake #3: You never told it who to be.

This is the big one. The one that changes everything.

When you don't give AI a role, it defaults to "helpful generic assistant." And helpful generic assistant writes like a textbook. No personality. No warmth. No you.

But when you tell it "you are my social media bestie who writes like I talk" or "you are me, a loan officer who's warm, direct, and never pushy," suddenly the answers come back sounding like somebody you actually want to read.

That's not a trick. That's just giving it the same thing you'd give any person helping you: context about who they need to be.

Here's the good news: once you see these three mistakes, you can't unsee them. And fixing them takes one simple formula.

Turn the page. This is where it gets fun.

CHAPTER 2

# The Formula

## Role + Context + Task + Format

That's it. That's the whole book in four words. Everything else is just practice.

Before you learn it, let me show you the difference it makes.

## The bad way

Most people prompt like this:

```
Write me a caption for my food post.
```

And AI gives back something like this:

> **WHAT AI GAVE BACK**
>
> Delicious and nutritious! 😋 Enjoy this tasty bowl packed with flavor. Perfect for any occasion! #food #yummy #foodie #delicious #healthy

Nobody is saving that. Nobody is even reading it. And it's not AI's fault, because you gave it nothing to work with.

## The good way

Now watch what happens when you feed it the formula:

```
Role: You are my social media bestie who writes captions in my
voice: warm, playful, a little sassy.

Context: I just posted a reel of chicken shawarma bowls with
turmeric rice. My audience is busy moms in San Antonio who
love easy weeknight meals.

Task: Write a caption that makes them want to save the recipe
and try it this week.

Format: Keep it under 80 words, end with a question, and give
me 5 hashtags.
```

**WHAT AI GAVE BACK**

Okay, these chicken shawarma bowls are about to save your Tuesday. 🙌 Juicy spiced chicken, golden turmeric rice, and a drizzle of garlic sauce, all on the table in 30 minutes. My kids went back for seconds and nobody asked "what's for dinner?" Save this one so you're not scrambling at 5:45. Be honest: what's your go-to busy-night dinner right now?

#easyweeknightmeals #sanantoniomoms #shawarmabowl #busymomdinners #weeknightdinner

Same tool. Completely different result.

Why? Because the second prompt told AI:

- **Role:** who to be. (My social media bestie, warm and sassy.)
- **Context:** what's going on. (Shawarma bowl reel, busy-mom audience.)
- **Task:** what you actually want. (A caption that makes people save the recipe.)
- **Format:** what it should look like. (Under 80 words, end with a question, 5 hashtags.)

Every prompt in this guide uses that same skeleton. Once you learn it, you stop starting from scratch. You just fill in the blanks.

## The optional fifth ingredient: Example

Sometimes AI still doesn't quite nail your voice. That's when you add an example: a sentence or two of something you wrote that you love.

```
Example: Here's how I usually sound: "Y'all, this one is going
on repeat in my house. My kids didn't even complain, and
that's saying something."
```

Now AI has your actual voice to match. This is the secret weapon. Use it whenever the output feels "close, but not quite me."

## Your forever template

Copy this. Save it in your phone notes. Use it every single time:

```
Role: You are [who AI should be].

Context: [What's going on / who this is for / what they need
to know].

Task: [Exactly what you want AI to do].

Format: [Length, tone, structure: how it should look].

Example (optional): [Something you wrote that shows your
voice].
```

Fill in the blanks. Hit enter. Watch it actually work.

That's the formula. Now let's put it to work on your real life.

CHAPTER 3

# Everyday Prompts

This is where the formula stops being theory and starts saving you time every single day. Four real-life situations, each with the bad way, the good way, and what came back.

## (a) An email that sounds like you

**The situation:** You need to email your kid's teacher about a missed assignment, but everything you draft sounds either too stiff or too casual.

### The bad way:

```
Write an email to my kid's teacher.
```

What you get: "Dear Mrs. Johnson, I am writing to inquire regarding..." You sound like you're applying for a job, not talking to your child's teacher.

### The good way:

```
Role: You are me, a friendly, respectful mom who gets straight
to the point.

Context: My daughter Maya missed turning in a science
assignment last week because she was sick. I want to ask her
teacher, Mrs. Johnson, if she can still turn it in for partial
credit.

Task: Write a short email asking about the late assignment.

Format: Under 100 words. Warm subject line. Sign off with my
name, Marie.
```

> **WHAT AI GAVE BACK**
>
> Subject: Quick question about Maya's science assignment
>
> Hi Mrs. Johnson,
>
> I hope your week is off to a good start! Maya was out sick last week and missed turning in her science assignment. Would it be possible for her to still turn it in for partial credit? She's feeling much better and ready to get caught up.
>
> Thank you so much for your understanding and for all you do for the kids.
>
> Warmly,
> Marie

Now it reads like a real person wrote it, because a real person told AI exactly who to be.

**Steal this template:** swap "kid's teacher" for anyone: your boss, your landlord, the dentist's office. The skeleton doesn't change.

## (b) A week of dinners

**The situation:** It's Sunday. The fridge has chicken, rice, and good intentions. You need five dinners and you do not have the mental energy to be creative.

### The bad way:

```
Give me meal ideas for the week.
```

What you get: a generic list featuring ingredients you don't own, recipes that take two hours, and at least one thing your kids would stage a protest over.

**The good way:**

```
Role: You are my practical meal-planning bestie who knows I
have zero time for complicated recipes.

Context: I'm cooking for me and two kids. We don't eat pork. I
have chicken, ground turkey, rice, pasta, black beans, and
frozen broccoli in the house. I need dinners for Monday
through Friday.

Task: Plan 5 dinners using mostly what I already have.

Format: One line per day: day, meal name, and the 3 main
ingredients. Keep every meal under 30 minutes. No pork.
```

**WHAT AI GAVE BACK**

Monday: Turkey taco rice bowls (ground turkey, rice, black beans)
Tuesday: Garlic chicken & broccoli pasta (chicken, pasta, broccoli)
Wednesday: 20-minute chicken fried rice (chicken, rice, broccoli)
Thursday: Easy turkey pasta bake (ground turkey, pasta, jarred sauce)
Friday: Cheesy chicken & black bean quesadillas (chicken, black beans, tortillas)

Grab if you don't have them: taco seasoning, a jar of pasta sauce, tortillas, shredded cheese.

Now you have a plan you can actually cook, plus a tiny grocery list you didn't even ask for. Notice how the constraints (no pork, what you already have, 30 minutes) are what make it useful. Constraints aren't limiting AI. They're *helping* it.

## (c) A social media caption

**The situation:** You took a cute picture and now you're staring at the caption box like it owes you money.

**The bad way:**

```
Write a caption for my photo.
```

What you get: "Living my best life ✨💕 #blessed." No. Absolutely not.

**The good way:**

```
Role: You are me: warm, funny, a little sassy, talking to my
friends.

Context: I just posted a photo of me and my kids at the park
on a Saturday. Nothing fancy, just a good day.

Task: Write a caption that feels real and relatable, not
perfect.

Format: Two short sentences max. No hashtags. End with
something that makes another mom smile.
```

WHAT AI GAVE BACK

Nothing fancy today, just me, my babies, and a park bench that's seen better days. Turns out the best Saturdays only need snacks and somebody yelling "watch this!" every five minutes.

The difference between a caption people scroll past and one people comment on is usually just **voice**. And voice comes from the Role line. Never skip it.

## (d) A touchy family message, handled with grace

**The situation:** Somebody in the family group chat made a comment that rubbed you the wrong way. You need to respond like a grown woman, not like how you *feel* like responding.

**The bad way:**

```
Help me reply to my cousin.
```

What you get: either a clapback that starts a three-day group-chat war, or a three-paragraph apology for something you didn't do. AI doesn't know the relationship, the history, or what you're trying to protect.

**The good way:**

```
Role: You are me: calm, kind, and confident, never petty.

Context: My cousin commented in the family group chat that I'm
"always on my phone now" and it "must be nice to have all this
free time for side hustles." I love her, and I don't want
drama, but I'm working hard to build something for my kids and
I'm not going to apologize for it.

Task: Draft a reply that clears the air without getting
defensive.

Format: Text-message length, under 60 words. Light and warm.
No shade.
```

> **WHAT AI GAVE BACK**
>
> Haha girl, I promise it's not free time 😅 It's early mornings and late nights after the kids are asleep, building something I'm really proud of. I'd love to tell you about it sometime! Love you, and I'm still coming for that potato salad at Thanksgiving.

Paste their message in. Let AI draft the calm version. Then read it, tweak one or two words so it sounds like you, and send it.

This one alone is worth the price of this book. The number of relationships saved by "let me run this through AI before I send it" is higher than anyone will admit.

**See the pattern?** Every single time: who AI should be, what's going on, what you want, what it should look like. Four lines and you're done.

CHAPTER 4

# Business Prompts

You already know the formula. Now let's put it to work on the stuff that makes money.

## Prompt like a closer: the follow-up

**The situation:** A lead filled out your inquiry form three days ago. You never followed up. (We've all been there.) You need a follow-up message that feels personal, not desperate.

**The bad way:**

```
Write a follow-up email to a lead.
```

What you'll get: "Dear Valued Customer, I am following up regarding your recent inquiry..." Straight to the trash folder.

**The good way:**

```
Role: You are me: a loan officer who's warm, direct, and never
pushy.

Context: A first-time homebuyer filled out my inquiry form 3
days ago asking about FHA loans. They haven't responded to my
first email.

Task: Write a short follow-up email that reminds them I'm here
to help, mentions one thing that makes FHA good for first-time
buyers, and ends with one easy question they can reply to.

Format: Under 120 words, friendly subject line included, sign
off as Marie.
```

**WHAT AI GAVE BACK**

Subject: Still dreaming about that first home?

Hi Jasmine,

Just checking back in after your question about FHA loans! One thing first-time buyers love: with FHA, you can buy with as little as 3.5% down (with a 580+ credit score), so you don't have to wait years to save 20%.

No pressure at all. I'm here whenever you're ready, even if you're just starting to look around.

Quick question: are you hoping to buy in the next few months, or just exploring for now?

Talk soon,
Marie

Now it sounds like you wrote it, because you told AI exactly who you are and who you're talking to.

Swap the details and the same skeleton works everywhere: a realtor checking in after a listing appointment, a salon reminding a client it's time for a fill-in, a photographer nudging someone who asked about pricing. The formula doesn't care what business you're in.

**Your turn:** Think of the email you hate writing most. That's your first template. Build it once with the formula, save it, and you'll never stare at a blank screen again.

## Replying to a price objection (without sounding defensive)

**The situation:** Someone loves your work but says "that's more than I expected." Your stomach drops. You want to defend your price without sounding... defensive.

### The bad way:

```
Someone said my prices are too high. What do I say?
```

What you get: generic sales advice that doesn't know your business, your prices, or your personality.

### The good way:

```
Role: You are me: confident in my worth, warm, never
apologetic about my prices.

Context: I sell [your product/service] for [your price]. A
potential customer said it's more than they expected to spend.
I do not offer discounts, but I do offer [payment plan /
what's included / guarantee].

Task: Write a reply that acknowledges their concern, reminds
them what they're actually getting, and invites them to move
forward, without apologizing for the price.

Format: Conversational, under 100 words. End with a question
that keeps the conversation open.
```

Here's what came back for a meal-prep coach who sells a $150, 4-week program and offers a two-payment plan:

> **WHAT AI GAVE BACK**
>
> I totally get it, and I appreciate you being upfront with me! Just so you can see the full picture: you're getting four weeks of meal plans built around your family, weekly grocery lists, and a Sunday check-in with me so you never feel stuck. If it helps, you can split it into two payments of $75. Would starting next Monday work for you?

Read that Role line again: *never apologetic about my prices*. The words you put in the Role line become the energy of the answer. If you tell AI you're confident, the draft comes back confident. If you tell it you're nervous, guess what you get.

## Turning messy voice notes into a professional email

**The situation:** You recorded a three-minute voice note to yourself with all your thoughts about a project. It's brilliant and completely unusable in its current form.

### The bad way:

```
Turn this into an email: [paste rambling transcript]
```

What you get: your ramble, slightly tidied up, still reading like a ramble.

**The good way:**

```
Role: You are my executive assistant who turns my scattered
thoughts into polished, professional communication.

Context: I recorded these thoughts about [project/client/
situation]. The person receiving this email is [who they are
and your relationship].

Task: Turn my notes into a clear, professional email. Pull out
the 3 main points and drop anything that's just me thinking
out loud.

Format: Short paragraphs. Professional but warm. Include a
clear next step at the end.

Here are my notes: [paste transcript]
```

Here's what came back from a rambling voice note about planning a holiday pop-up with a fellow small-business owner:

WHAT AI GAVE BACK

Subject: Next steps for our holiday pop-up

Hi Tasha,

Thanks again for being open to partnering on the pop-up! After thinking it through, here's where I landed:

1. Date: Let's move to Saturday the 15th so we have an extra week to promote.
2. Setup: I'll bring the tables and signage. Could you cover the tablecloths and the card reader?
3. Promotion: Let's both post the flyer by the 1st and do a joint live the week of.

Next step: could we hop on a quick 15-minute call Thursday to lock it in?

Best,
Marie

This is one of my favorite uses, honestly. Talk it out like you're venting to a friend, then let AI do the translating. You get the speed of talking with the polish of writing.

## Summarizing a long document into what actually matters

**The situation:** Someone sent you a 20-page document. You have 20 minutes. These two things are not compatible.

### The bad way:

```
Summarize this document.
```

What you get: a summary that's technically accurate and practically useless. It trims words but doesn't tell you what *matters*.

**The good way:**

```
Role: You are my sharp business advisor who cuts through
fluff.

Context: I'm a [your role] and someone sent me this
[contract / report / proposal]. I need to decide [what
decision you're making].

Task: Summarize this document focusing only on what affects my
decision. Flag anything that's a red flag, a hidden cost, or a
deadline I need to know about.

Format: Bullet points. Start with a 3-sentence bottom line,
then "What you need to know," then "Watch out for."

Here is the document: [paste text]
```

Here's what came back for a small-business owner deciding whether to sign a social media manager's contract:

**WHAT AI GAVE BACK**

Bottom line: This is a 6-month contract at $400/month, so you're committing to $2,400 total. You can't cancel early without a fee, and they keep ownership of the graphics they create. It's workable, but negotiate the ownership clause before you sign.

What you need to know:
- Starts the 1st of next month and auto-renews for another 6 months
- Includes 12 posts per month and a monthly analytics report
- Payment is due on the 1st, with a 5% late fee after 10 days

Watch out for:
- Early cancellation fee equal to 2 months ($800)
- You must give 30 days' written notice to stop auto-renewal
- Content ownership: you can't reuse their graphics if you leave

See what changed? You told AI what **decision** you're making. A summary for "should I sign this?" looks completely different from a summary for "what are the main topics?" Context is what turns a generic summary into an actually useful one.

*One reminder: for contracts and anything legal or financial, AI helps you understand it. A professional should still look before you sign.*

Four business prompts. Four templates you can reuse forever. And notice: every single one started with the same four lines from Chapter 2. You're not learning new tricks. **You're just getting reps.**

CHAPTER 5

# Make It a Habit

Knowing the formula is step one. Using it without thinking about it is the real win. Here's how you get there.

## Save your winners

Every time AI gives you an answer that makes you think "oh, that's good," save the *prompt*, not just the answer.

That's exactly what your bonus **My Prompts Library** is for. It came with this guide, already set up with categories and all ten starter prompts loaded in. Open it, paste in the prompts that work for you, and next time you need a caption, a follow-up email, or a meal plan, you don't start from zero. You open your library, copy, swap the details, and go.

Within a month you'll have 15 to 20 prompts that are basically your personal assistant, trained on exactly how you like things done.

## Tweak, don't restart

Here's a mistake I see all the time: AI gives you something that's 80% right, and people throw the whole thing away and start over with a brand-new prompt.

Don't do that. Talk to it like you'd talk to a person helping you:

- "This is good, but make it shorter."
- "Keep everything, just make the tone warmer."
- "I like the second paragraph. Rewrite the rest to match it."

Here's what that looks like. Say the teacher email from Chapter 3 felt a little too formal. One follow-up line:

```
Make it sound a little more relaxed, like I've emailed her
before.
```

**WHAT AI GAVE BACK**

Hi Mrs. Johnson!

Hope your week's going well. Maya was out sick last week and missed turning in her science assignment. Any chance she could still turn it in for partial credit? She's feeling much better and ready to catch up.

Thanks so much!
Marie

Same email, better fit, five seconds of effort. AI is great at revisions. One of its best skills is taking feedback. Use that. Three rounds of tweaking will always beat three rounds of starting over.

## Build your library by category

Your My Prompts Library is already organized under four headers. Keep adding to them:

- **Emails:** follow-ups, difficult replies, introductions
- **Content:** captions, hooks, video scripts
- **Home:** meal plans, grocery lists, schedules
- **Business:** objections, summaries, proposals

When a category gets 5 or 6 prompts in it, you've basically built yourself a custom tool. That's not an exaggeration. People pay good money for prompt packs that are worse than what you'll have.

## When NOT to use AI

Real talk: AI is a tool, not a replacement for your judgment. Here's when to put it down:

- **When it needs your actual lived experience.** AI can draft the post, but only you know the story behind it. The best content is your real stories with AI helping on the wording, not the other way around.
- **When the stakes are legal, medical, or financial.** Use AI to *understand* the document, then take it to a professional. AI is a starting point, not an advisor.
- **When you haven't read what it wrote.** Never copy-paste an AI answer without reading it first. It's your name on it. A 30-second read saves you from the one time it confidently says something wrong.
- **When the human touch IS the product.** A condolence message. An apology you owe someone. Some things should come from your heart, unedited. You'll know.

The goal was never to let AI do everything. The goal is to let it handle the blank page, the first draft, the tedious parts, so you have more energy for the parts that actually need *you*.

CHAPTER 6

# Bonus: 10 Copy-Paste Starter Prompts

Your starter pack. Each one is labeled with when to use it. Copy, fill in the brackets, go. (They're also waiting for you in your My Prompts Library, ready to copy.)

## 1. The caption writer

**When to use it:** any post where you're stuck on words.

```
Role: You are me: warm, funny, a little sassy, talking to my
friends.

Context: I'm posting [describe the photo or video] for [who
your audience is].

Task: Write a caption that feels real, not perfect.

Format: [Number] sentences max. [Include / no] hashtags. End
with [a question / a call to action / nothing].
```

## 2. The email drafter

**When to use it:** any email you're dreading.

```
Role: You are me: [friendly and direct / warm and
professional / calm and firm].

Context: I'm writing to [who] about [what]. Our relationship
is [describe it in a few words].

Task: Draft this email for me.

Format: Under [number] words. Include a clear subject line.
```

## 3. The meal planner

**When to use it:** Sunday night, empty brain, hungry family.

```
Role: You are my practical meal-planning bestie.

Context: I'm cooking for [who]. We don't eat [restrictions]. I
have [list what you've got] and I shop at [store].

Task: Plan [number] dinners using mostly what I already have.

Format: One line per day: meal name and 3 main ingredients.
Every meal under [number] minutes.
```

## 4. The difficult message

**When to use it:** before you send a text you'll regret.

```
Role: You are me: calm, [professional / kind / firm], never
petty.

Context: [Who] said/did [what happened]. I need to respond but
I want to [protect the relationship / hold my boundary / clear
the air]. Here's what they wrote: [paste it].

Task: Draft a reply that says what I need to say without
escalating.

Format: [Text / email] length, under [number] words. [Warm but
final / kind but clear / professional and brief].
```

## 5. The follow-up

**When to use it:** leads going cold, clients going quiet.

```
Role: You are me: [warm, direct, never pushy].

Context: [Who] [filled out my form / asked about pricing /
went quiet after our call] [when]. They were interested in
[what].

Task: Write a follow-up that reopens the conversation
naturally.

Format: Under 100 words. Include a subject line. End with one
easy question they can reply to.
```

## 6. The price objection

**When to use it:** "that's more than I expected."

```
Role: You are me: confident in my worth, warm, never
apologetic about my prices.

Context: I sell [product/service] for [price]. A potential
customer said it's more than they expected. I [don't
discount / offer payment plans / include (bonus)].

Task: Write a reply that acknowledges their concern and
reminds them of the value, without apologizing for the price.

Format: Conversational, under 100 words. End with an open
question.
```

## 7. The voice-note translator

**When to use it:** brilliant thoughts, messy delivery.

```
Role: You are my executive assistant who turns scattered
thoughts into polished communication.

Context: These are my notes about [topic]. The recipient is
[who and your relationship].

Task: Turn my notes into a clear, professional [email /
message]. Pull out the main points and drop the thinking-out-
loud parts.

Format: Short paragraphs. End with a clear next step.

Here are my notes: [paste]
```

## 8. The document decoder

**When to use it:** long document, short attention span.

```
Role: You are my sharp advisor who cuts through fluff.

Context: I'm [your role] and I received this [contract /
report / proposal]. I need to decide [your decision].

Task: Summarize only what affects my decision. Flag red flags,
hidden costs, and deadlines.

Format: Start with a 3-sentence bottom line, then "What you
need to know," then "Watch out for." Bullet points.

Here is the document: [paste]
```

## 9. The content idea machine

**When to use it:** "I need to post something but I have no ideas."

```
Role: You are my creative director who knows my audience cold.

Context: I create content about [your topics] for [your
audience]. I want to post [this week / today] and I prefer
[reels / carousels / talking videos / photos].

Task: Give me [number] content ideas I can actually make with
what I have.

Format: One line each: the hook first, then what to film in
parentheses.
```

## 10. The week reset

**When to use it:** Sunday night overwhelm.

```
Role: You are my calm, no-judgment planning partner.

Context: This week I have [work schedule / appointments /
deadlines]. I also need to fit in [content / errands / rest /
family time]. I'm feeling [overwhelmed / behind / okay but
scattered].

Task: Help me map out the week: what matters most each day,
and what can wait.

Format: Day by day, 2 to 3 priorities max per day. Include one
rest block. Keep it realistic, not aspirational.
```

There they are. Ten prompts, zero blank pages. Screenshot this chapter, keep your library handy, and use them daily.

WHAT'S NEXT

# Go Prompt Like You Mean It

You made it to the end, and now you know something most people using AI don't: it's not about the tool. It's about how you talk to it.

**Role. Context. Task. Format.** Four lines that turn a generic robot into something that actually sounds like you and works like you need it to.

Start small. Pick one prompt from Chapter 6 and use it this week. Then another. Soon it'll just be how you prompt.

**Ready for the next step?**

If you liked this way of thinking (giving a system your voice, your context, and your rules, then letting it do the heavy lifting), that's exactly what my **Lead Follow-Up Kit** does for your business.

When a new lead fills out your form, the kit sends them a warm, personal email from you within seconds and sends you a CALL NOW alert, so nobody slips through the cracks while you're living your life.

Set it up yourself with the DIY Kit, or let me build it for you. One-time purchase, no monthly fees from me.

**See the Lead Follow-Up Kit →**

Tap here, or scan the code with your phone camera.

For now, though: go prompt like you mean it. You've got this.

— Marie
